1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

> A person shall be entitled to a patent unless –
>
> (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
>
> (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
>
> (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Staples (4,013,502).

3. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Mauger (4,966,663).

4. Claims 12 and 13 are rejected under 35 U.S.C. 102(e) as being anticipated by Hirano et al 6,215,250 (Hirano). These claims are anticipated by the description of figures 2D and 3, column 7, lines 46-67. The specifics of the mask (not disclosed) used in the deposition of the organic electroluminescent material is not seen to result in different color electroluminescent display structure, in so far as claimed.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 9-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hirano in view of Mauger (4,966,663). Hirano, column 7, lines 46-67, discloses a method of forming individual color pixels by vapor deposition through a mask which can be moved to a new position or exchanged for the forming of pixels of another color. The specific mask is not described; however, it would have been obvious to one of ordinary skill in the art at the time of applicants' invention to employ a silicon mask made by the process of Mauger (4,966,663) since the same provides a high degree of accuracy.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hashimoto et al discloses a similar mask manufacturing step.
